

Visio Services Extension

Fact Sheet

The oneAssist **Visio Service Extension** adds additional functionalities to the Visio Services of Microsoft SharePoint Server missed by many users. Great importance was attached to seamlessly integrate the new features with the Visio Web Access Web Part while not making the user interface more complex.

The Visio Services Extension in the Visio Web Access Web Part of SharePoint Server 2013 with enabled Print and Auto Zoom button and highlighted hyperlinks.

Once installed on the SharePoint Server the **Visio Services Extension** adds the following features to each Visio Web Access Web Part:

Print

Diagrams viewed within the Visio Web Access Web Part can be directly printed from the user's preferred browser, saving the user from opening the file with the Visio client application.

The printing template can be used to add a header logo and a foot note to each print out which helps in enforcing the corporate design.

Auto Zoom

Visio files store the last view. Opening a Visio file in the Visio Web Access Web Part will restore the view. This is why users have to carefully restore the correct view when making changes to files that are displayed on a SharePoint server to prevent display errors.

Activating the Auto Zoom feature will automatically set the zoom factor to show the whole drawing even if the size of the browser window is changed.

Highlighting of Hyperlinks

If Shapes within a diagram contain hyperlinks they can be automatically highlighted with a configurable hyperlink symbol.

Extended Hyperlinks

When clicking on hyperlinks to Office documents users can view these within the Office Web Applications. Usually these would be opened using the installed offline client application or just downloaded.

If a Visio diagram contains hyperlinks to files supported by the Office Web Applications these open within the same window, replacing the current file and preventing a deluge of windows. This helps the user focusing on the essential.

The following file types can be viewed directly within the browser using the extended hyperlinks:

FILE EXTENSION	NAME	SHAREPOINT APPLICATION
vsdX	 Visio Drawings	Visio Web Access
vsdm	 Visio Drawings incl. Macros	Visio Web Access
vdx	 Visio 2010 Web Drawings	Visio Web Access
docx	 Word Documents	Word Web App
pptx	 PowerPoint Presentations	PowerPoint Web App
xlsx	 Excel Spreadsheet	Excel Web App
